on Anti-bacterial Hand Gel

1 sample received from Magna International Pte Ltd

on 30 July 20 03.

SAMPLE LABEL

One sample in a dispenser bottle, capped, sealed and bearing the following commercial label,

" Magna-Legionella-X, 110ml  
Viral-Rub  
Anti-Bacterial Hand Gel  
Magna-G12, Canada "

TEST METHOD

Modified Kelsey Sykes Capacity Test Option for Hospital Grade Disinfectant under dirty conditions. Four test organisms, *Escherichia coli* NCTC 8196, *Proteus vulgaris* NCTC 4635, *Pseudomonas aeruginosa* NCTC 6749 and *Staphylococcus aureus* NCTC 4163 were used. The inoculum size of each of the test organisms was not less than  $2 \times 10^8$  or more than  $2 \times 10^9$  organisms introduced into the individual test samples of the disinfectant solution. The disinfectant was tested neat.

The method is essentially that given by Kelsey & Maurer (Kelsey, J.C and Maurer Isobel, M. Pharmaceutical Journal (UK) 213: 528-230, (1974)). The disinfectant is tested at the use-concentration recommended by the manufacturer. The test consists of challenging the disinfectant with bacterial inoculum, withdrawing a sample after a given time (8 minutes) and culturing the sample in a suitable recovery culture medium. After this sampling, the mixture is again challenged by a second inoculum and after a second interval (18 minutes) is again sampled for culturing. The sample is passed or failed according to the extent of growth shown in the two cultures sampled.
