SGH TEST REPORT

MODIFIED KELSEY SYKES CAPACITY TEST

HOSPITAL GRADE DISINFECTANT

PRODUCT INFORMATION SGH TEST REPORT NO C297 / 03

PRODUCT CODE LEGIONELLA-X HD-MIRACLE DATE OF TEST 7 AUGUST 2003

DESCRIPTION ANTI-BACTERIAL STAIN REMOVER FOR KITCHENWARE

Department of Pathology

Fax: 2226826

Lab No.: C 297/03

Date: 7 August 2003

REPORT

(This report is not to be used for advertising purposes)

on	Disinfectant Solution		*
1	sample received from	Magna International Pte Ltd	
on	30 July 20 <u>03</u> .		

SAMPLE LABEL

One bottle of sample, capped and sealed, bearing the following commercial label,

" Magna-Legionella-X, 500ml Magna HD-Miracle Antibacterial Stain Removal for Kitchenware

Magna-G12 Pte Ltd, Canada "

TEST METHOD

Modified Kelsey Sykes Capacity Test Option for Hospital Grade Disinfectant under dirty conditions. Four test organisms, Escherichia coli NCTC 8196, Proteus vulgaris NCTC 4635, Pseudomonas aeruginosa NCTC 6749 and Staphylococcus aureus NCTC 4163 were used. The inoculum size of each of the test organisms was not less than 2 X 108 or more than 2 X 109 organisms introduced into the individual test samples of the disinfectant solution. The disinfectant sample was tested neat.

The method is essentially that given by Kelsey & Maurer (Kelsey, J.C and Maurer Isobel, M. Pharmaceutical Journal (UK) 213: 528-230, (1974)). The disinfectant is tested at the use-concentration recommended by the manufacturer. The test consists of challenging the disinfectant with bacterial inoculum, withdrawing a sample after a given time (8 minutes) and culturing the sample in a suitable recovery culture medium. After this sampling, the mixture is again challenged by a second inoculum and after a second interval (18 minutes) is again sampled for culturing. The sample is passed or failed according to the extent of growth shown in the two cultures sampled.
