

SGH TEST REPORT

MODIFIED KELSEY SYKES CAPACITY TEST

HOSPITAL GRADE DISINFECTANT

PRODUCT INFORMATION

SGH TEST REPORT NO

C284 / 03

PRODUCT CODE **LEGIONELLA-X VIRAL-FREE**

DATE OF TEST

24 JULY 2003

DESCRIPTION

MULTI-PURPOSE DISINFECTANT & CLEANER

Singapore General Hospital

A Tradition of Caring & Excellence

Department of Pathology

Fax: 2226826

Lab No.: C 284/03

Date: 24 July 2003

REPORT

(This report is not to be used for advertising purposes)

on Disinfectant Spray

1 sample received from Magna International Pte Ltd

on 15 July 20 03.

SAMPLE LABEL

One bottle of sample, capped and sealed, bearing the following commercial label,

“ Magna-Legionella-X, 500ml
Viral-Free
Multi-Purpose Disinfectant & Cleaner

Magna-G12, Canada ”

TEST METHOD

Modified Kelsey Sykes Capacity Test Option for Hospital Grade Disinfectant under dirty conditions. Four test organisms, *Escherichia coli* NCTC 8196, *Proteus vulgaris* NCTC 4635, *Pseudomonas aeruginosa* NCTC 6749 and *Staphylococcus aureus* NCTC 4163 were used. The inoculum size of each of the test organisms was not less than 2×10^8 or more than 2×10^9 organisms introduced into the individual test samples of the disinfectant solution. The disinfectant sample was tested neat.

The method is essentially that given by Kelsey & Maurer (Kelsey, J.C and Maurer Isobel, M. Pharmaceutical Journal (UK) 213: 528-230, (1974)). The disinfectant is tested at the use-concentration recommended by the manufacturer. The test consists of challenging the disinfectant with bacterial inoculum, withdrawing a sample after a given time (8 minutes) and culturing the sample in a suitable recovery culture medium. After this sampling, the mixture is again challenged by a second inoculum and after a second interval (18 minutes) is again sampled for culturing. The sample is passed or failed according to the extent of growth shown in the two cultures sampled.
